### SKILLS

---

**LANGUAGES:** HTML, CSS, JavaScript/ES6, Ruby

**FRAMEWORKS:** React, Rails, Angular

**DATABASES:** MongoDB, PostgreSQL

**LIBRARIES:** Materialize/Bootstrap, jQuery, Johnny-Five, Multiple Ruby Gems

### PROJECTS

---

#### Vagabond

Travelogue built with Ruby on Rails. MVP scope was developed in a pair-programming environment and extra features were built individually. I was responsible for securing routes, configuring mailers, and implementing BCrypt.

#### What's the Fuss

An app to report incidents in a user's vicinity. Relying on GoogleMaps API, I implemented the geolocation feature, & variable timeline for events displayed, configured mailers, and implemented Carrierwave & Fog-AWS.

#### Morsebot

Solo project experimenting with technologies outside of GA's curriculum. I built an IoT prototype that decodes Morse using a Photon Microcontroller. Employed the JohnnyFive.js library and Voodoospark firmware. (N.B., a Photon microcontroller is required to use the site.)

### EDUCATION

---

#### GA WDI

2016

Built full-stack web applications in Rails and MEAN stack, independently and in groups. Applied agile development practices and OOP principles.

#### UT Austin

BA Spanish Literature & Government 2003

### EMPLOYMENT

---

#### Linea Caffe

Lead Barista

Helped found Linea, establish & maintain wholesale relations.

San Francisco, CA

2013 to 2015
