SKILLS

LANGUAGES: HTML, CSS, JavaScript/ES6, Ruby
FRAMEWORKS: Angular, Rails, React
DATABASE TOOLS: MongoDB, PostgreSQL
LIBRARIES: Materialize/Bootstrap, jQuery, Johnny-Five, Multiple Ruby Gems

PROJECTS

Vagabond
Travelogue built with Ruby on Rails. MVP scope was developed in a pair-programming environment and extra features were built individually. I was responsible for securing routes, configuring mailers, and implementing BCrypt.

WTF?!? (What's The Fuss?!?)
Waze for pedestrians! Relying on GoogleMaps API, I implemented the geolocation feature, & variable timeline for events displayed, configured mailers, and implemented Carrierwave & Fog-AWS.

Morsebot
Capstone solo project. Experimenting with unknown technologies outside of GA's curriculum, I built an IoT prototype that decodes Morse using a Photon Microcontroller. (N.B., a microcontroller is required to use the site.)

EDUCATION

GA WDI
2016
Immersive web development course to acquire skills and implement them in projects listed.

UT Austin
BA Spanish Literature & Government 2003
